Silver Spring, MD | (301) 655-0614 | rmizrahi03@gmail.com | [linkedin.com/in/mizrahiraphael](https://www.linkedin.com/in/mizrahiraphael)

PROFESSIONAL SUMMARY

Early-career technology professional with hands-on experience in Linux systems, Python development, and automation projects. Built and maintained self-hosted servers, developed API-driven tools, and provided technical support in educational environments. Interested in infrastructure, cloud technologies, and systems engineering.

TECHNICAL SKILLS

- Systems & Infrastructure: Linux Administration (hands-on), Server Setup, Networking Fundamentals, Remote Access, System Troubleshooting
- Programming: Python, C (familiar), Algorithms & Data Structures
- Backend & APIs: Flask, REST APIs, API Integration, Environment Configuration
- Automation & Data: Task Automation, Scripting, Data Processing, Real-time Data Handling
- Cloud: AWS Fundamentals, Cloud Architecture Concepts
- Tools: Git, Linux CLI (familiar), HTML/CSS/JavaScript (basic)

TECHNICAL EXPERIENCE

Technical Analyst/Computer Programmer – R@MLogic | 2019 - Present

- Worked on internal technical projects supporting software development and operational workflows
- Collaborated on tool design, testing, and troubleshooting of technical issues
- Implemented solutions that improved system efficiency and team productivity

Madrich (Dorm Counselor) - Yeshivat Yishrei Lev | August 2023 - June 2024

- Provided mentorship and daily support for students in a residential dorm environment
- Managed student supervision, curfew coordination, and dorm operations
- Assisted with medical and logistical needs when required
- Participated in school programming, trips, and community activities
- Helped maintain a structured, supportive, and organized living environment

Teacher's Assistant – Yeshiva of Greater Washington | August 2020 - June 2021

- Installed and configured operating systems and classroom software on school computers
- Provided technical support and troubleshooting assistance for students
- Helped manage and maintain classroom lab environments and instructional materials
- Supported hands-on learning projects including building and programming with Arduino microcontrollers

TECHNICAL PROJECTS

Automated Momentum Trading Application (In Development)

- Built a Python trading system using Alpaca market data and APIs
- Implemented real-time stock scanner using EMA and MACD indicators
- Developed Flask server to run cloud-based trading engine
- Integrated news filtering and automated alert pipeline

Self-Hosted Linux Server Environment

- Installed and configured Linux server operating systems
- Configured secure remote administration and SSH access

- Managed networking configuration, storage services, and system permissions
- Monitored system health and performed troubleshooting across hardware and software layers
- Diagnosed and resolved operating system, service, and hardware issues

File Duplication Detection Application

- Developed a Python application to identify duplicate files within large datasets
- Implemented hashing and file comparison logic for efficient detection of identical files
- Built the tool to support storage optimization and automated file management

Custom Browser

- Built a custom browser application to experiment with web navigation and behavior
- Implemented core functionality including page rendering and navigation controls
- Explored browser architecture and web interaction through hands-on development

EDUCATION

Yeshiva of Greater Washington

Bachelor of Talmudic Law

Computer Science Training — Harvard CS50

- Built programs using C and Python
- Implemented algorithms and data structures
- Developed problem-solving and debugging techniques
- Studied memory management, program design, and computational thinking

AWS Cloud Fundamentals (Independent Study)

- Studied core AWS services including compute, storage, and identity management
- Learned cloud infrastructure architecture and scalability concepts
- Explored security principles in cloud environments
